

Clinic Stats

On the left is a column showing outcomes of all our clients with since Jan 2021 who have committed to working with us in the way we advise. The number refers to the year of birth of the mum, the colour indicates the outcome (see the key below).

All these clients fully engaged with the process:

- ran the tests we advised
- engaged with other specialists or consultants when we felt their assistance was required (urologists, functional medicine nutritionists, specialist ultrasonographers etc)
- most worked with both myself and Gill Hind (my visceral osteopath colleague).

The Key	
The number refers to the year of birth of the mum.	
	Natural Pregnancy
	IVF Pregnancy
	IUI Pregnancy (single parent)
	Withdrew after 12+ weeks

The vast majority of these clients had either been told by their doctor that they needed IVF, or assumed that this was their only way forward. Several of the natural pregnancies were achieved with couples who came to us to prepare for IVF or clients who had previously had one or more unsuccessful IVF cycles.

I have not included clients still actively engaged in treatment with me or in the process of IVF after preparation with us.

On the next page is a full list which includes clients who withdrew after 5 treatments or less and those that withdrew after between 6-11 treatments.

On this page is a column illustrating the outcome of all the clients we have worked with since 2021, including clients who did not fully engage or withdrew before the minimum advised 12 treatments.

The Key	
The number refers to the year of birth of the mum.	
	Natural Pregnancy
	IVF Pregnancy
	IUI Pregnancy (single parent)
	Withdrew after 5 treatments or less
	Withdrew after between 6-11 treatments
	Withdrew after 12+ treatments

I have not included clients still actively engaged in treatment with us or currently going through IVF after preparing for it with us.

* we do not track the outcome of clients who withdrew before completing the process of working with us; some of the clients who withdrew may have been successful by now.

(when IVF clinics publish their stats, they rarely include clients who withdraw or clients who have cycles cancelled)
